

Abiodun Osagie-Raji (Biodun Raji)

Full-stack Engineer

raji.osagie.abiodun@gmail.com · abiodunraji.github.io · github.com/abiodunraji · Lagos, Nigeria

SUMMARY

Full-stack engineer who builds the whole system a problem needs, in whatever stack it needs. Mostly that is software: web and mobile products, APIs and data models, payments, back-office consoles, and AI agents that do real work behind safety gates written in code. Around it sits the operation: search and AI visibility, store and CMS work, monitoring and process. I run an independent studio for clients in Nigeria and the Netherlands; in 2026 that meant a 733-product retail storefront and Dutch site, store and search work, alongside a live savings-circle product. In tech since 2010.

Taking on studio projects; open to senior and leadership roles in engineering, architecture, platform, data and AI, security and product, in any stack, and to operations, strategy, transformation and delivery work wherever a system can solve the problem. Based in Lagos: on-site or remote, worldwide.

SKILLS

Products	Web and mobile apps, APIs and data models, Payments, Marketplaces, Storefronts, CMSs
Operations	Back-office consoles, Monitoring, Process automation, CI/CD, Security hardening
AI & agents	Multi-agent pipelines, Agents behind coded safety gates, LLM features, AI-search visibility
Growth	Technical SEO, Search Console, Google Business Profile, Shopify, Conversion tracking
Delivery	Test-first, Playwright end-to-end, Scoping and fixed-fee pricing, Written client reports
Stack so far	TypeScript, JavaScript, Python, SQL, React / Next.js, Astro, Vue 3, React Native / Expo, Node.js / NestJS, FastAPI, PostgreSQL / Supabase, Neo4j, Redis, Cloudflare Workers, D1, R2, Docker, Vercel, Shopify, Sentry / Grafana

SELECTED PROJECTS

Ajoko [Product & engineering](#) · Live product 2025–present

A live record-keeper for rotating savings circles (ajo). It never holds anyone's money.

- Whole member lifecycle, onboarding to disputes; the first real circle completed with zero defaults.
- Staff back-office: monitoring, role-based access, support inbox, disputes console, audit log, announcements.

Next.js · React · Supabase (RLS) · PostgreSQL · Redis · Vercel · React Native / Expo

Marcplaats [Engineer](#) · Client project 2026–present

A hyperlocal photo-spotting app (PWA), in continuous delivery since May 2026.

- Business rules enforced in the database: row-level security, rate-limit triggers, CHECK constraints.
- GPS-first upload with map-pin fallback, Serwist PWA, Sentry; a failing Playwright test before every feature.

Next.js 15 · Supabase · PostgreSQL · Leaflet / Mapbox · PWA (Serwist) · Playwright · Sentry · Vercel

Retail storefront for a Lagos phone shop [Design, build & launch](#) · Client project 2026

A 733-product catalogue built around WhatsApp orders, with an owner panel.

- Workers, D1 and R2 store with an owner self-service panel; each WhatsApp tap counted as a conversion.
- Verified its Google Business Profile; homepage indexed and 774 pages discovered in Search Console.

Cloudflare Workers · D1 · R2 · Wrangler · Google Business Profile · Search Console

House of Faridah [Engineer](#) · Client project 2025–present

A multi-brand site for a Nigerian interior-design and construction company, with its own CMS.

- Two sub-brands in one app, an admin portal and a portfolio CMS with galleries and watermarking.
- Image weight cut from 61 MB to 8.5 MB; the Interiors page is interactive in 2–9 s, down from 27–90+ s.

React 18 · Vite · TypeScript · Radix UI · Tailwind CSS · Framer Motion · GitHub Pages

MORE PROJECTS

Local-SEO agency website (NL) · Client project · 2026 — Google indexing from 3 of 14 pages to 11 of 13.

SEO specialist's brand site (NL) · Client project · 2026 — Rebuilt the site and integrated a nine-route redesign.

Conference-venue SEO (NL) · Client project · 2026 — 20 pages fixed and 6 translated inside a booking CMS.

Doll-shop Shopify store (NL) · Client project · 2026 — Reopened the store; card contrast from 1.1:1 to 8.36:1.

Diploma — Folu Computer Institute

2007–2010

Formal computing diploma that launched a tech career; in the industry ever since — in-house roles at several businesses, then full-time freelance, project-based engineering.

Self-taught, production-first

2010–present

Modern stack (TypeScript, React/Next.js, Node/NestJS, Python/FastAPI, Postgres/Supabase, Docker, CI/CD, Playwright e2e) learned by shipping real products — see Selected projects.
