

0 defaults Ajoko's first live circle, 7 members	61→8.5 MB image weight cut on a live site	733 products WhatsApp-first Lagos store	2010 shipping software since
SUMMARY	Full-stack engineer who builds the whole system a problem needs: web and mobile products, APIs and data models, back-office consoles, and AI agents that do real work behind safety gates written in code. I run an independent studio for clients in Nigeria and the Netherlands.		
SELECTED WORK	Ajoko Product & engineering · Live product A live record-keeper for rotating savings circles (ajo). It never holds anyone's money. – Whole member lifecycle, onboarding to disputes; the first real circle completed with zero defaults. – Staff back-office: monitoring, role-based access, support inbox, disputes console, audit log, announcements. – Closed a 25-alert security pass, and self-hosted the font so the ₦ sign and Yoruba characters render correctly. Next.js · React · Supabase (RLS) · PostgreSQL · Redis · Vercel · first version in React Native / Expo Marcplaats Engineer · Client project A hyperlocal photo-spotting app (PWA), in continuous delivery since May 2026. – Business rules enforced in the database: row-level security, rate-limit triggers, CHECK constraints. – GPS-first upload with map-pin fallback, Serwist PWA, Sentry; a failing Playwright test before every feature. Next.js 15 · Supabase · PostgreSQL · Leaflet / Mapbox · PWA (Serwist) · Playwright · Sentry · Vercel Retail storefront for a Lagos phone shop Design, build & launch · Client project A 733-product catalogue built around WhatsApp orders, with an owner panel. – Workers, D1 and R2 store with an owner self-service panel; each WhatsApp tap counted as a conversion. Cloudflare Workers · D1 · R2 · Wrangler · Google Business Profile · Search Console House of Faridah Engineer · Client project A multi-brand site for a Nigerian interior-design and construction company, with its own CMS. – Image weight cut from 61 MB to 8.5 MB; the Interiors page is interactive in 2–9 s, down from 27–90+ s. React 18 · Vite · TypeScript · Radix UI · Tailwind CSS · Framer Motion · GitHub Pages		
SKILLS	Stack so far TypeScript, JavaScript, Python, SQL, React / Next.js, Astro, Vue 3, React Native / Expo, Node.js / NestJS, FastAPI, PostgreSQL / Supabase, Neo4j, Redis, Cloudflare Workers, D1, R2, Docker, Vercel, Shopify, Sentry / Grafana AI & agents Multi-agent pipelines, Agents behind coded safety gates, LLM features, AI-search visibility Products Web and mobile apps, APIs and data models, Payments, Marketplaces, Storefronts, CMSs Growth Technical SEO, Search Console, Google Business Profile, Shopify, Conversion tracking Operations Back-office consoles, Monitoring, Process automation, CI/CD, Security hardening Delivery Test-first, Playwright end-to-end, Scoping and fixed-fee pricing, Written client reports		
EDUCATION	Diploma — Folu Computer Institute In the industry ever since: in-house roles at several businesses, then full-time freelance, project-based engineering. Self-taught, production-first 2007–2010 2010–present
