

Abiodun Osagie-Raji (Biodun Raji)

Full-Stack Engineer · Python / FastAPI / AI

raji.osagie.abiodun@gmail.com · abiodunraji.github.io · github.com/abiodunraji · Lagos, Nigeria

SUMMARY

Full-stack engineer with a Python core — I take products from a blank repo to production. My recent focus is Python/FastAPI backends and LLM systems: Dreamy AI is a 7-agent generation pipeline on FastAPI, PostgreSQL, Neo4j and Redis, with Prometheus/Grafana/Sentry observability across containerised services. Around that I own the full stack — React/Vue front-ends, data modelling, auth and row-level security, Docker, CI/CD, and Playwright e2e tests from day one. Prior work spans fintech (NestJS, payments), a healthcare-professional marketplace, and a hyperlocal social app.

SKILLS

Languages	Python, TypeScript, JavaScript, SQL	Backend	FastAPI, NestJS, Node.js, REST APIs, Prisma
Data & infra	PostgreSQL, Neo4j, Redis, Supabase (RLS), Docker, GitHub Actions CI	Quality & AI	LLM pipelines, Multi-agent systems, Playwright (E2E), Test-first / AI-TDD, Observability (Sentry/Grafana)
Frontend	React, Next.js, Vue 3, Astro, Tailwind CSS, React Native / Expo		

EDUCATION & TRAINING

Diploma — Folu Computer Institute 2007–2010

Formal computing diploma that launched a tech career; in the industry ever since — in-house roles at several businesses, then full-time freelance, project-based engineering.

Self-taught, production-first 2010–present

Modern stack (Python/FastAPI, TypeScript, React/Next.js, Node/NestJS, Postgres/Supabase, Neo4j, Docker, CI/CD, Playwright e2e) learned by shipping real products — see Selected projects.

SELECTED PROJECTS

Dreamy AI 2025–2026

Engineer

A multi-agent platform that generates full-length novels from a concept.

- 7-agent generation pipeline (concept → knowledge graph → blueprint → write → critique → polish) producing 80k+ word books.
- Story continuity backed by a Neo4j knowledge graph; a multi-critic/reviser quality system with ML quality prediction.

FastAPI · Vue 3 · PostgreSQL · Neo4j · Redis · Celery · LLM pipeline

HealthBrew 2025–present

Founder & Lead Engineer

A marketplace platform for healthcare professionals.

- Built the full platform end-to-end: admin, backend API, and data layer.
- Designed HCP verification (license-number handling, role-upgrade review) with privacy-safe user exposure helpers.

Ajoko

2025–2026

Engineer

A ROSCA (rotating savings) fintech app across web and mobile.

- Full-stack fintech: backend (NestJS/Prisma), web, admin, and a mobile client.
- Auth, payments, and the dual UX/security failure-mode discipline that fintech demands.

NestJS · React · React Native / Expo · PostgreSQL · Redis

Marcplaats

2026

Full-stack Engineer

A hyperlocal photo-spotting app for a single city, built test-first.

- Every business rule enforced at the database — RLS policies, triggers (rate limits, new-user delay), and CHECK constraints (geofencing to one city).
- GPS-first upload flow with an Alkmaar-constrained manual map-pin fallback and platform-aware permission recovery.

Next.js 15 · Supabase · Leaflet · PWA · Playwright · PostgreSQL

House of Faridah

2025

Engineer

A multi-brand site for an interior-design & construction company, with its own CMS.

- Two sub-brands (Interiors + Construction) in one app, plus an admin portal and a content-managed portfolio system.
- Image galleries with watermarking, lightbox, and a copy-paste 'add a project' workflow for the client.

React · Vite · TypeScript · Radix UI · Tailwind · Framer Motion
