Ajoko's first live circle, 7 members	image weight cut on a live site	WhatsApp-first Lagos store	shipping software since

SUMMARY

Full-stack engineer who builds the whole system a problem needs; this version leads with Python and AI. Multi-agent pipelines on FastAPI, PostgreSQL, Neo4j, Redis and Celery, with Prometheus, Grafana and Sentry across containerised services, and AI agents that do real work behind safety gates written in code. I run an independent studio for clients in Nigeria and the Netherlands.

SELECTED WORK

Ajoko — Product & engineering · Live product — 2025–present

A live record-keeper for rotating savings circles (ajo). It never holds anyone's money.

- Whole member lifecycle, onboarding to disputes; the first real circle completed with zero defaults.
- Staff back-office: monitoring, role-based access, support inbox, disputes console, audit log, announcements.
- Closed a 25-alert security pass, and self-hosted the font so the ₦ sign and Yoruba characters render correctly.

7 members · 0 defaults

25 alerts closed

Next.js · React · Supabase (RLS) · PostgreSQL · Vercel · first version in React Native / Expo

Marcplaats — Engineer · Client project — 2026–present

A hyperlocal photo-spotting app (PWA), in continuous delivery since May 2026.

- Business rules enforced in the database: row-level security, rate-limit triggers, CHECK constraints.
- GPS-first upload with map-pin fallback, Serwist PWA, Sentry; a failing Playwright test before every feature.

marcplaats.com

43 Playwright tests

Next.js 15 · TypeScript · Supabase · PostgreSQL · Leaflet / Mapbox · PWA (Serwist) · Playwright · Sentry · Vercel

Retail storefront for a Lagos phone shop — Design, build & launch · Client project — 2026

A 733-product catalogue built around WhatsApp orders, with an owner panel.

- Workers, D1 and R2 store with an owner self-service panel; each WhatsApp tap counted as a conversion.

733 products

Cloudflare Workers · D1 · R2 · Wrangler · Google Business Profile · Search Console

House of Faridah — Engineer · Client project — 2025–present

A multi-brand site for a Nigerian interior-design and construction company, with its own CMS.

- Image weight cut from 61 MB to 8.5 MB; the Interiors page is interactive in 2–9 s, down from 27–90+ s.

SKILLS

Stack so far Python, FastAPI, TypeScript, JavaScript, SQL, React / Next.js, Vue 3, Astro, Node.js / NestJS, PostgreSQL / Supabase, Neo4j, Redis, Cloudflare Workers, D1, R2, Docker, React Native / Expo

AI & agents Multi-agent pipelines, LLM features, Agents behind coded safety gates, AI-search visibility

Backend & data FastAPI, Celery, REST APIs, PostgreSQL, Neo4j, Redis, Supabase (RLS)

Operations Docker, CI/CD, Security hardening, Observability (Prometheus, Grafana, Sentry)

Products Web and mobile apps, APIs and data models, Payments, Marketplaces, Storefronts

Delivery Test-first, Playwright end-to-end, Scoping and fixed-fee pricing, Written client reports

EDUCATION

Diploma — Folu Computer Institute — 2007–2010

In the industry ever since: in-house roles at several businesses, then full-time freelance, project-based engineering.

Self-taught, production-first — 2010–present
